

Andrew Peter

FULL-STACK DEVELOPER

Toronto, Canada

416.435.0126 | andrewpeter@gmail.com | <https://ca.linkedin.com/in/andrewpeter> | www.andrewpeter.com

Languages/Platforms/Skills

- C, C#, Java, SQL, HTML, JavaScript, Typescript, Python, React, Bash, Flask, JSON, Tailwind CSS, Node.js
- Jira, Git, Unity, Bitbucket, Confluence, Docker, BigQuery, Jupyter Lab, SQL Server, PostgreSQL
- AI Prompt Engineering, Database Design, User Interface Design, Data Structures, AWS, Heroku, REST APIs, CI/CD

Work Experience

Software Developer, Bank of Montreal, Toronto - January 2022 — August 2022 (Co-op)

- Streamlined debugging processes by implementing enhanced C# middleware logging, reducing dependency on cross-team communication and cutting debugging times by up to 8 hours, significantly improving the Market Risk Technology Team's efficiency
- Enhanced data-driven decision-making by crafting complex SQL queries to extract and analyze real-time data from company databases, ensuring accuracy and up-to-date information for critical business functions

IT Project Control Coordinator, Canadian Imperial Bank of Commerce, Toronto - May 2021 — August 2021 (Co-op)

- Supported senior project managers on large-scale technology projects by managing issues, tracking action items, maintaining repositories, and documenting key insights in meeting minutes

Projects

- **Iteratively** – Designed and developed a word-based game using Vite, React, and AWS Amplify, leveraging a serverless architecture with Amazon API Gateway. Submitted as an entry for the AWS Game Builder Challenge Hackathon, showcasing innovation and technical expertise in cloud-based application development
 - Implemented user authentication with Amazon Cognito, word validation using Datamuse API, and starting word generation with AWS Bedrock
 - Utilized Amazon S3 for hosting game sound effects and DynamoDB for maintaining a high-score leaderboard
- **jobnavigAltor.com** – Developed an application leveraging AI to streamline the process of applying to and interviewing for jobs. Utilized OpenAI APIs and Python for natural language processing and generation. Employed technologies such as Flask for the backend, PostgreSQL for the database, and React for the frontend
 - Features include tracking job applications, generating cover letters and thank you emails, customizing resumes to match job postings, and preparing for interviews with tailored questions
- **Ra1nb0w** - Developed a 3D physics-based platformer with multiple levels using the Unity game engine, written in C#. See <https://play.unity.com/mg/other/webgl-builds-330917>
- **Retail Discord Bot** - Built a Discord bot using Python to parse JSON data from a clothing brand's website, alerting users to changes in stock

Education and Certifications

Bachelor of Computing, Honours, University of Guelph (With Distinction) - September 2018 — June 2023

DeepLearning.AI Chat GPT Prompt Engineering for Developers - February 2024

AI-900 Microsoft Azure AI Fundamentals - November 2023

AWS Cloud Practitioner; AWS Knowledge: Cloud Essentials - August 2023
